Aspiring Data/Business Analyst who turns messy datasets into insights people can act on — from building financial KPI models to predicting customer churn and forecasting stock prices, using Python, SQL, Excel and Power BI along the way.

SKILLS

Data Analysis & Business Reporting: Data Analysis, Business Analyst, KPI Analysis, Performance Analysis, Business Insights, Data-Driven Decision Making, Business Reporting, Performance Reporting, Trend Analysis

Programming & Querying: Python, SQL, Data Extraction, Data Manipulation, Filtering, Sorting, Aggregation

Data Analysis & Excel: Pandas, NumPy, Microsoft Excel (VLOOKUP, XLOOKUP, Pivot Tables), Data Cleaning, Data Preprocessing, Missing-Value Handling, Data Validation, Exploratory Data Analysis (EDA), Descriptive Analysis, Data Formatting, Data Summarization

Data Visualization: Power BI, Dashboard Development, KPI Dashboards, Data Visualization

Machine Learning: Machine Learning, Deep Learning, Image Classification, Transfer Learning, Fine-Tuning, Data Augmentation, Model Training, Model Evaluation, Logistic Regression, Random Forest, Time-Series Forecasting (ARIMA), Statsmodels, Scikit-learn

Tools & AI: Jupyter Notebook, TensorFlow, Keras, yfinance, GenAI, Prompt Engineering

EDUCATION

Oriental College of Technology, Bhopal, India — B.Tech, Computer Science (AI & ML), CGPA: 7.22/10.0 (Currently in 3rd Year, Sept 2023 – Present)

GCM Convent School, Nowgong, Madhya Pradesh — Class 12, 82% (2022 – 2023)

EXPERIENCE / INTERNSHIPS

Bluestock Fintech — Data Analytics Intern

May 2026 – August 2026

Nifty100 Financial Intelligence Platform

- Pulled 12 Excel datasets — company financials, ratios, market cap, peer/sector data — into one ETL pipeline (Python, Pandas, NumPy, OpenPyXL), landing everything in a centralized SQLite database.
- The resulting KPI engine tracks 50+ financial indicators (ROE, margins, Debt-to-Equity, EPS, Free Cash Flow) across 4 stock-screening categories, so companies could be compared side by side.
- Wrapped it in a Streamlit and Plotly dashboard that ranks companies and returns a 5-level recommendation, Strong Buy to Strong Sell, at a glance.

Bluestock — Mutual Fund Analytics

- Brought together 10 datasets — 40 mutual fund schemes, ~46K NAV records, 32K+ investor transactions — and engineered features to support performance and risk analysis.
- Measured risk and return through CAGR, Annualized Return, Volatility, Sharpe Ratio, Maximum Drawdown, Value at Risk (VaR), Conditional Value at Risk (CVaR), 90-day Rolling Sharpe Ratio and the Herfindahl-Hirschman Index (HHI).
- Capped it off with a rule-based fund recommendation system and a Power BI dashboard covering performance, risk, investor behavior and SIP trends.

GenZ Educatewing — Business Analyst Intern

June 2026 – July 2026

Customer Churn Analysis & Prediction

- Dug into churn with 20+ SQL queries, cross-checked in Python, landing on 26.53% overall churn and 42.71% among month-to-month customers across 7,043 records.
- Slicing the data by contract type, internet service and tech support usage pointed to one clear danger zone: month-to-month + Fiber Optic + no tech support, at roughly 57% churn.
- Tested Logistic Regression against Random Forest for predicting churn; Logistic Regression won out at 80.77% accuracy, with results shared through a Power BI dashboard built for the retention team.

Financial Forecasting — AAPL Stock Prices

- Took on forecasting AAPL stock prices with ARIMA, testing 6 configurations before settling on ARIMA(2,1,1) through walk-forward validation.
- The model landed a MAPE of 1.12% (MAE 3.05, RMSE 4.36), produced a 30-trading-day forecast, and fed into a Power BI dashboard showing trends and performance.

Codec Technologies — Machine Learning Internship

Oct 2025 – Nov 2025

- Supported model training, testing and evaluation on provided datasets, picking up data preprocessing and validation practices along the way.

PROJECTS

AI-Based Garbage Segregation System

Oct 2025 – Jan 2026

- Built an image classifier with MobileNetV3-Large to sort waste into 6 categories.
- Trained it on 15,135 images (80:20 split), with resizing, normalization and augmentation to get the data ready.
- Fine-tuned through transfer learning to land around 91–92% validation accuracy.
- Accuracy alone doesn't tell the whole story, so precision, recall, F1-score and a confusion matrix were used to see where the model was getting confused.

CERTIFICATIONS

- Deloitte Data Analytics Virtual Experience — hands-on tasks in data analysis and visualization.
- Data Analytics Using Excel (Coursera) — Excel-based data cleaning, formulas and visualization.
- SQL for Data Analysis (HackerRank) — practiced queries for filtering, aggregation and analysis.
